**StandardAero offers an on-line option that provides customers an easy way to monitor, manage and approve work orders on their MRO events at any of our facilities.**

### User Friendly, Secure Web Access!

Don't have time to be on-site at your next MRO event? StandardAero provides a user friendly way to monitor, manage and approve work on-line using secure web access. This allows you to check the status, be automatically notified of changes and approve work from anywhere you can access the web. The community based technology allows you to communicate directly with your Customer Project Manager (CPM), approve or reject pending squawks, review cost and ensure your project is on schedule. The user friendly interface avoids the learning curve that many MRO project tracking systems require.

### Customer's Perspective

"The online squawk approval system is terrific. It will enhance any customer's visit to StandardAero. It is a comprehensive tool to track squawks as they occur. There is a multitude of information being given to the customer. It is easy to use and very intuitive. It's a great tool." - Ray Tintle, Director of Maintenance for Starr Equipment.

### Benefits

MyStandardAero.Com on-line project management capability can increase your productivity and help manage your next MRO event whether you're on-site or at home.
