

CFM56-7B

The New Standard in Aviation MRO

An excellent MRO partner must go beyond the typical maintenance requirements of the average customer and create tailored solutions. Over 100 years in the aviation industry have taught us that one size does not fit all when it comes to creating maintenance programs – you are unique, and so are your requirements. We understand this, and by utilizing our vast experience and resources, we make sure you receive the best solution for your particular operation.

Downtime is not an option. Reducing the amount of time your engine spends off-wing is our priority. StandardAero's world-class facilities, induction availability and "rapid response" support team of program managers, engineers, technologists and specialists will ensure that your engines get back in the air in the shortest amount of time possible. When it comes to an Aircraft-On-Ground situation, we understand that it isn't always practical or affordable to send your engines to one of our maintenance facilities. That's why our troubleshooting and field service teams are available 24 hours a day and strategically located around the globe to provide you with quick and convenient solutions.

No two maintenance programs are alike. You are a unique customer and deserve to be treated like one. We will custom-design a maintenance solution to best suit your operational requirements, regardless of fleet size. StandardAero has been an Authorized CF34™ Service Provider for the last decade and have significant engineering experience in repair development. Our ability and dedicated resources to do one-off repairs rather than replace worn or damaged parts will help reduce turn times and minimize your overall maintenance costs.

Authorized independence delivered with flexibility. Sending your CFM56-7B engines to an MRO facility that is a licensed GE Designated Fulfillment Center gives you peace of mind that your engines are in the right hands. StandardAero's relationship with GE allows us to deliver comprehensive material and technological support benefits to our customers. As an independent MRO provider, we also exercise the ability to perform customized work scopes, giving you the flexibility to proactively manage your operations.

CFM56 is a trademark of CFM International, a 50/50 joint company of Snecma (Safran Group) and GE.
