StandardAero's Springfield, Illinois facility houses one of North America's most capable corporate jet service facilities.

For over 30 years, this one-stop facility has performed hundreds of modifications, inspections, interior refurbishments, avionics installations and paint on the world's most popular business jet aircraft. Springfield is an authorized service center for Falcon airframe and Honeywell turbine engine inspection. With over 150 technicians averaging more than 15 years experience at Springfield, you can be assured that your work will be completed on time and on budget, on every job.

Certification Services

As an alternative to FAA-direct certification services, StandardAero can deliver considerably shorter STC certification times that can ultimately reduce downtime. StandardAero's Organization Designation Authorization (ODA – Certification number ODA-100079-CE) allows us to perform certification work for customers in approved facilities anywhere around the world. Our extensive STC library is a culmination of certification projects we have completed since 1974. In addition to many engine, airframe and avionics modifications already in place, we have STCs for partial and full interiors including fully functional galleys, passenger seating changes, new lavatories, cabinets, oxygen systems, potable water, waste water, 120VAC/60Hz electrical supply/distribution and much more.
