

## Quality

At StandardAero (A DAE Company), our commitment is to deliver the safest product and highest quality of service available in the industry. For over 40 years we have been a leading provider of complete maintenance, repair services and emergency support for the Rolls Royce Model 250 engine. We stand behind the products and services we provide and are proud of the value they offer. Customer satisfaction has always been our guarantee.

Through our Optimal Build Program we optimize performance of your engine based on mission profiles and operating conditions. Our policy of "repair rather than replace" on certain worn or damaged parts can lower DOC's (direct operating costs) and prolong the valuable life of an engine.

## Service

At StandardAero we put our customers first and focus on what is important to you and your business. Our Service Center personnel are strategically located in six overhaul facilities worldwide and are available 24 hours a day, 365 days a year to assist you on-site with Aircraft on Ground (AOG) and technical expertise.

We strive to reduce your downtime and minimize costs with our extensive Model 250 rental engine fleet. Our cellular production system ensures greater efficiency within our business, which we pass on to you by getting you back in the air faster.

Expert Technicians pride themselves in quality workmanship and our representatives offer the highest level of customer service. They are available to visit and assist you wherever and whenever is most convenient for you and your aircraft.

## Innovation

Our employee innovation has been used to redesign our workflow process, allowing us to provide shorter turn times on engine work. Every day, our people are working hard to make your engine safer and more efficient.

Development of our PowerCheck Software allows operators to easily perform trend monitoring of their engine performance.

Special processes such as Laser Cladding and Micro Brazing allow us to constantly develop new engine repair techniques to enhance the productivity and prolong the life of every engine we touch. Our engineers are in the field assessing the environmental factors and applications that affect engines in order to ensure our customers have the right engine to complete their job.

We're learning new things all the time and we want to share our knowledge with you. We offer an array of engine courses on all series of the Model 250 engine to help Operators keep up with the latest maintenance techniques and practices. These courses can be taught at our facility, yours or an alternate location.

StandardAero has a long and successful history with the Rolls Royce Model 250 engine. We're ready to add yours to the legacy.
