

## Aircell Axxess® Cabin Connectivity System

### Our Customers' Challenge:

Our customers need their business jets to be more productive so that their people can work and stay in touch while they travel but most satellite-based systems are too slow, too large, too heavy or too expensive to install in all but the largest business aircraft.

### The StandardAero Solution:

StandardAero can get your business jet online with the latest productivity tool from Aircell®. Aircell Axxess® has created a new network powered by the same wireless standard as most mobile broadband services. Not only is this equipment lighter and smaller, it's faster than the previous generation of 64 kbps satellite links. It operates like what you're used to on the ground.

### Product Overview:

Aircell Axxess® is the base Cabin Connectivity System that provides worldwide voice and narrowband data service (fax, Airshow, ACARS, etc.) over the Iridium network. This is an open architecture system that allows you to add functions, change network links and easily upgrade to new functionality and options as they become available. By itself, the base system doesn't provide any high speed Internet connectivity. To the standard Aircell Axxess® system, you can add your choice of high speed data connections – including Aircell® High Speed Internet (which is Aircell's new ground-based network in the U.S.). When you add Aircell High Speed Internet service to Aircell Axxess, the ATG 4000 is the box you add – it was designed specifically as an Aircell Axxess add-on for Aircell High Speed Internet (see option below). Aircell Axxess® offers a replacement for current MagnaStar® systems.

### Why StandardAero?

StandardAero has unique expertise from our legacy as Garrett Aviation Services.

- **Quality personnel – 249 Factory-Trained Technicians**
- **Reliability – Our technicians average 14.8 years in house.**
- **Innovation – 13 Engineers on staff.**
- **Engine Expertise – 1,457 years of MRO experience.**
- **Airframe Expertise – 2,207 years of MRO experience.**

## Upgrades & Installation:

- **Base Cabin Connectivity System (does not include high speed Internet - the ATG 4000 option below provides that functionality.)**
- **Estimated Downtime – 18-24 working days**
- **Estimated Interior Access – \$8K - \$15K**  
*(May not be required if done in conjunction with additional workscope)*
- **Estimated Installation Price – \$75K - \$85K**
- **The Base Cabin Connectivity System plus ATG 4000 option provides high speed Internet access (it is more cost efficient to install this option along with the base system, rather than after the base system is installed)**
- **Estimated Downtime – 20-26 working days**
- **Estimated Installation Price – \$155K - \$165K**
- **Estimated Interior Access – \$10K - \$18K**  
*(May not be required if done in conjunction with additional workscope)*
