StandardAero World-Class Paint Capabilities

StandardAero's Springfield, Illinois corporate jet services facility houses one of the world's most capable and sophisticated paint facilities.

Our Customers' Challenge:

Mid-Size to Super Large Business Jet owners and operators want the best paint quality and aesthetics, but they also want to ensure that their airframe and skin is free from and protected against corrosion. Moreover, they want a state-of-the-art paint facility that is adjacent to airframe, engine, avionics and interiors capabilities – just in case stripping an aircraft for paint uncovers any problems.

The StandardAero Solution:

StandardAero's 62,000 square foot environmentally controlled paint facility is one of the finest and most sophisticated in the world with full tip-to-tail MRO capabilities serving Business Jets for over 30 years. It is staffed with master paint technicians who believe that anything is possible and that whatever your paint expectations are – they can make them a reality.

Paint Capabilities:

Three paint bays comprise our 62,000 square foot paint facility. The bays are environmentally controlled to maintain the perfect climatic and pressure conditions ensuring the finest paint quality in the industry.

- **Exterior Design** - Long before your aircraft arrives our designers work with you to create a custom design that meets your specifications.
- **Stripping & Inspection** – A complete paint bay is devoted to stripping and sealing. After all previous paint and primer are removed, the entire aircraft's skin is carefully inspected for any damage due to corrosion. When corrosion and resultant damage are identified we can perform any repair on the spot.
- **Priming** – Bay two is devoted to the critical process of priming and preparing aircraft for paint. Specially designed cross-flow air technology guarantees quality results.
- **Painting** – The paint bay is a downdraft, heat and humidity controlled environment. To ensure the highest quality paint application, we utilize air make-up units similar to those used in hospital operating rooms.
