

YOUR READINESS IS OUR FIRST PRIORITY

Global Design Defence Services

Mission Support:

StandardAero is an industry-leading independent modification and upgrade provider for fixed and rotary-wing aircraft to customers across all operational segments and requirements.

Modification Services

StandardAero has been providing aviation modification and maintenance services for government and military operators worldwide for nearly 60 years. Our experience includes field support on deployments and in combat zones.

We provide tailored services based on each individual operator's needs, which can include field maintenance to comprehensive modification packages to enhance capability and manage obsolescence. Tailored service solutions range from depot and field-level engine and aircraft MRO to design, modifications, and STC development programs.

Defence

Mission-ready | Secure | Future-proof

Helicopters play a crucial role in modern military operations. Their manoeuvrability and multirole capabilities offer a tactical advantage in locations where other means of transport or force projection may not be an option.

StandardAero is a trusted provider of maintenance, repair, overhaul (MRO) and modification services to military forces and government agencies around the world, with a 75 year heritage. Our unique insight and experience in supporting military operators, due to our historical connection with the UK MoD and armed forces worldwide, is renowned.

We provide certified technical solutions addressing capability enhancement and obsolescence management applicable to legacy platforms including the Super Puma, Lynx, Sea King, and Gazelle. We convert aircraft from Oil & Gas to Utility roles and our certified solutions (eg.CVFDR, ADS-B, HTAWS) address global regulatory mandates.

We offer a comprehensive range of services, spanning engine, propeller, component and rotary-wing airframe MRO, plus significant mission system integration services, including avionics, weapons sights, sensors and self-protection systems.

We offer OEM-authorized engine MRO for a wide range of military rotorcraft engines, including the GE T700 and CT7, Safran Helicopter Engines Arriel 1 and Arriel 2, and P&WC PT6T.

As an authorized service center for Airbus Helicopters and Sikorsky, StandardAero also offers extensive capabilities in helicopter airframe and dynamic component MRO. We also provide support for a wide range of Bell military applications.

Our technical support teams are regularly called upon to support our defence customers in-theater, often for years at a time, and StandardAero employees have provided embedded support for operations across the globe.

StandardAero also offers extensive experience in developing and installing defensive aids suites, radar installations, weapons sights, FLIR/EO imaging systems, avionics upgrades and other mission systems.

Our range of existing combat-proven mission system modifications for helicopters and tactical aircraft, allied with our ability to rapidly develop reliable solutions to meet the specific needs of our customers, can help minimize operational risk, maximize operational effectiveness and ensure mission success in all environments, day and night.

Here are some examples of the many ways in which we support our military customers:

- Weapons and sighting installations
- Ballistic protection
- Glass cockpit upgrades
- Infrared suppression systems
- AESA radar installations
- Crashworthy auxiliary fuel tanks
- NVIS lighting solutions
- Defensive aids suites
 - DIRCM, MAWS, RWR, chaff, and flare dispensers

Homeland Security

Versatile | Affordable | Reliable

Homeland security and border patrol personnel operators worldwide use helicopters to support a wide range of missions, including airborne patrol, tactical law enforcement, search and rescue, emergency medical assistance, surveillance, anti-terrorism operations and border security missions.

StandardAero supports airborne operators with a wide range of avionics and mission system modifications which enhance operational effectiveness while ensuring crew safety.

Here are some examples of the many ways in which we support our homeland security customers:

- FLIR/EO systems
- High-intensity searchlights
- Hoist installations (single and dual)
- External loudspeaker system
- Glass cockpit upgrades
- Flight management systems
- Satellite tracking systems

MEDEVAC/CASEVAC

Protected | Effective | Available

MEDEVAC/CASEVAC crews operate in a truly 'life or death' environment, being tasked with safely transporting patients in all weather, day or night, often from unfamiliar landing locations. Operating against the clock, crews handle the pressure of the 'golden hour' day in and day out.

StandardAero is able to help operators meet the ever-increasing demands of MEDEVAC/CASEVAC regulations through its comprehensive portfolio of safety-enhancing avionics and mission equipment. StandardAero develops tailor-made solutions to support our customers, maximizing the safety of their crews and patients.

Here are some examples of the many ways in which we support our MEDEVAC/CASEVAC customers:

- Glass cockpit upgrades
- NVIS lighting solutions
- Polycon radio
- On-board medical equipment
- Flight data monitoring
- Crash-resistant fuel tanks

Search and Rescue (SAR)

Responsive | All-weather | Capable

SAR missions by their nature involve some of the most difficult operating conditions and terrain. SAR crews must retrieve, transport and sometimes even treat casualties in life-threatening circumstances.

StandardAero has developed mission-proven solutions for SAR operators that allow them to locate and rescue their target as quickly and safely as possible.

Here are some examples of the many ways in which we support our SAR customers:

- FLIR/EO systems
- VIDAR installations
- High-intensity searchlights
- Hoist installations (single and dual)
- Advanced navigation systems
- Glass cockpit upgrades
- NVIS lighting solutions
- Sea trays

VIP Transport

Safe | Secure | Efficient

Helicopters are an invaluable means of support for VIP and communications missions around the world, providing a convenient, comfortable and safe option. Their versatility makes them equally suitable for operations from an airport, marine vessel, or forward operating area.

StandardAero offers its VIP transport customers tailored solutions to fully meet their requirements. Whether for a single aircraft or a fleet of rotor-craft, our designers can develop a customized solution to your specifications or utilize off-the-shelf offerings for immediate availability, maximizing your comfort and safety.

Here are some examples of the many ways in which we support our VIP aviation customers:

- VIP/business seating configurations
- Command and control communications
- Vibration and noise reduction systems
- Advanced avionics systems
- Cabin management systems
- ECS upgrades
- Satellite communications and data systems installations

GLOBAL SERVICE | LOCAL SUPPORT

Global Infrastructure

Our worldwide footprint of MRO facilities, service centers, international design teams and mobile repair team locations allows us to provide operators with local support on a global scale, working around the clock to keep our customers flying.

We offer our customers tailored modification and upgrade solutions through a broad range of certifications and STC approvals. Our existing STC library includes over 500 approved fixed- and rotary-wing STCs.

- FAA Part 145 and FAA Approved ODA
- EASA 21J (design)
- EASA Part-M (CAMO)
- UK MAA DAOS & MAOS
- TCCA AMO
- EASA 21G (production)
- EASA 145 (MOA)
- TCCA DAO
